

"With Actel, OUR time is on your side."

You are in a time-defined environment... The speed of applications, of components and systems, of development, of production cycles and of the market are all functions of time and outside your control.

Our FPGAs save precious nanoseconds in chip-to-chip and internal delays, allowing you to create applications that could never before be integrated in single-chip programmable logic devices.

The intrinsic speed of our SX FPGAs allows for quick design using generic RTL code — shaving days or weeks off your project schedule. Our unique easy-to-use debug tools save further time and get your design to market sooner.

The combination of the SX FPGA's high performance and the convenience of its field programmability lets us save you the weeks or months you would have spent waiting for an ASIC.

Success depends on managing what you can of these variables. At Actel, we've found three ways to take control of time, to preserve it and to use it to your advantage.

The Actel SX FPGA will get time on your side, or we'll give you our FAE's timepiece.

As shown in the examples on these pages, other companies have faced difficult design tasks and were saved by the Actel SX. Our FAEs were able to demonstrate to those companies, and on their systems, that the Actel SX could meet their requirements, no matter how difficult.

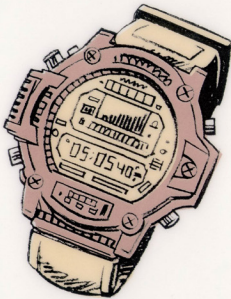

We've found that if we're given the time to benchmark an application, we can prove that the SX will meet or exceed agreed-upon performance specs. If we're wrong, you get the watch off our FAE's wrist.

BY THE WAY,
IT'S A FULL-FEATURED CASIO.
ENTER TO WIN ONE HERE.

www.actel.com/sx.html

If you're already convinced, and you've called your distributor, here's how to get a shot at the watch anyway. On our Web site, there's a place to tell your own time story. When you do, you'll automatically be entered in a second, separate drawing.

Get Actel and get time on your side.

For information on our FAE offer, or on the contest, or on any of these applications, just visit: www.actel.com/sx.html or call 1-888-99ACTEL
